Letter

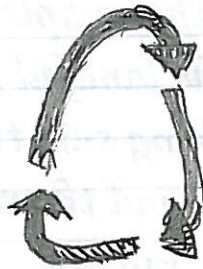

Dear the landfill staff,

I enjoyed the fun, and educational field trip. Thank you very much for having us. I never knew that one aluminum serve exactly one hour of T.V.! Also, I've never known that 8.17 pounds come from one person every Tuesday! That's a lot of trash. Lastly, I've learned that you can't dispose paint cans. And, I liked the way you guy's showed us the samples of how the liner felt, and the picture of the landfill area.

I'd help the world by making sure that I through the right things in the garbage and the right things that are supposed to go in the recycling bin.

Dear Mrs. Thompson, Joe, and Mr. Biologist,
Thank you for the awesome feildtrip.
I learned you can't throw away batteries
and cleaning products. If I could go
into this feildtrip again I
would love to. Thankyou again!

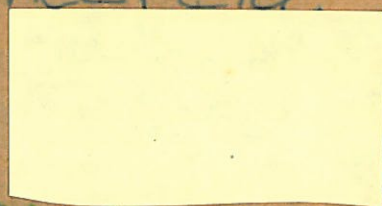

Reduce
Reuse
Recycle

Dear Mrs. Thompson, Joe, Mr. -
biologist,

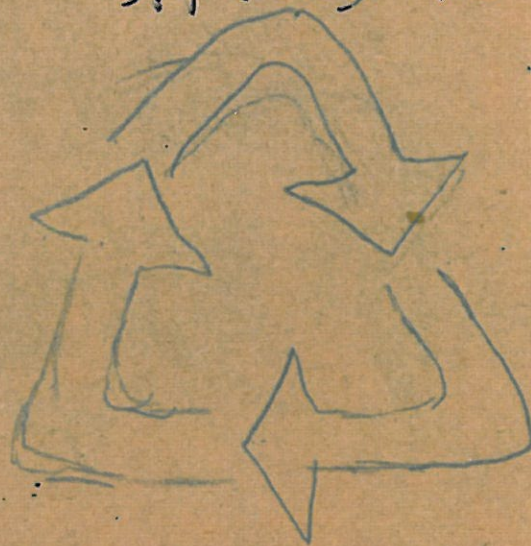

I learned that landfills
don't sort, so all things that
can get recycled but don't
go into the landfill. I also
learned that the greenery
make yard things out of
the thing they get. I'm
going to walk farther
to recycle.

Sincerely,

R. Recycle, reuse, Reduce

1. Reduce → 2. Reuse

3. Recycle

11.19.09
Dear Mrs. Thompson, Joe and
Mr. Biologist

Yesterday I learned that
you have seagle problems and
that you line the landfills.
Also I think I can help by
recycling more since I know
that #1 and 2 are safe for
recycling. I loved the field
trip I give it a 9 out of 10
Sincerely,

Thank You ~~Emilia~~!

One of my favorite things I
learned was that it took three
years to dig that giant hole to
put the garbage in. I also
liked it when you explained
about the hard gravel stuff.
So for now on I'm going to
work harder on everything
including giving old stuff to
Good-Will.

Sincerely,

January 9th, 2009

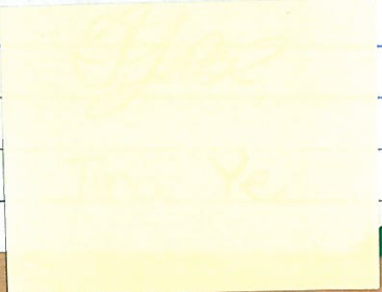

For: EnviroTour

(Canyon View Elementary)

Dear Mrs. Thompson, Joe, and Mr. Biologist,

Thank-you for helping me understand the meaning of Recycling. I learned that if you see  with a 1 or 2 inside it it is recyclable. If there is a 3, 4, 5, 6, or 7, it is not. I also was amazed that you actually have a guy watching for seagulls 24 hours and 7 days a week. It was also interesting to see that you collect pots from the garbage. That is a lot of pots! Well, I am just writing to say thank-you. Oh yeah, and I am deciding to reduce, reuse, and recycle as often as possible. I don't want our world to become "Trashy Town", like in the movie Wall-E. Ok, G2G!

Best Wishes,

~~Reduce~~ ^{We} ~~can~~ ^{again}

Recycle ^{Reuse} for the Earth

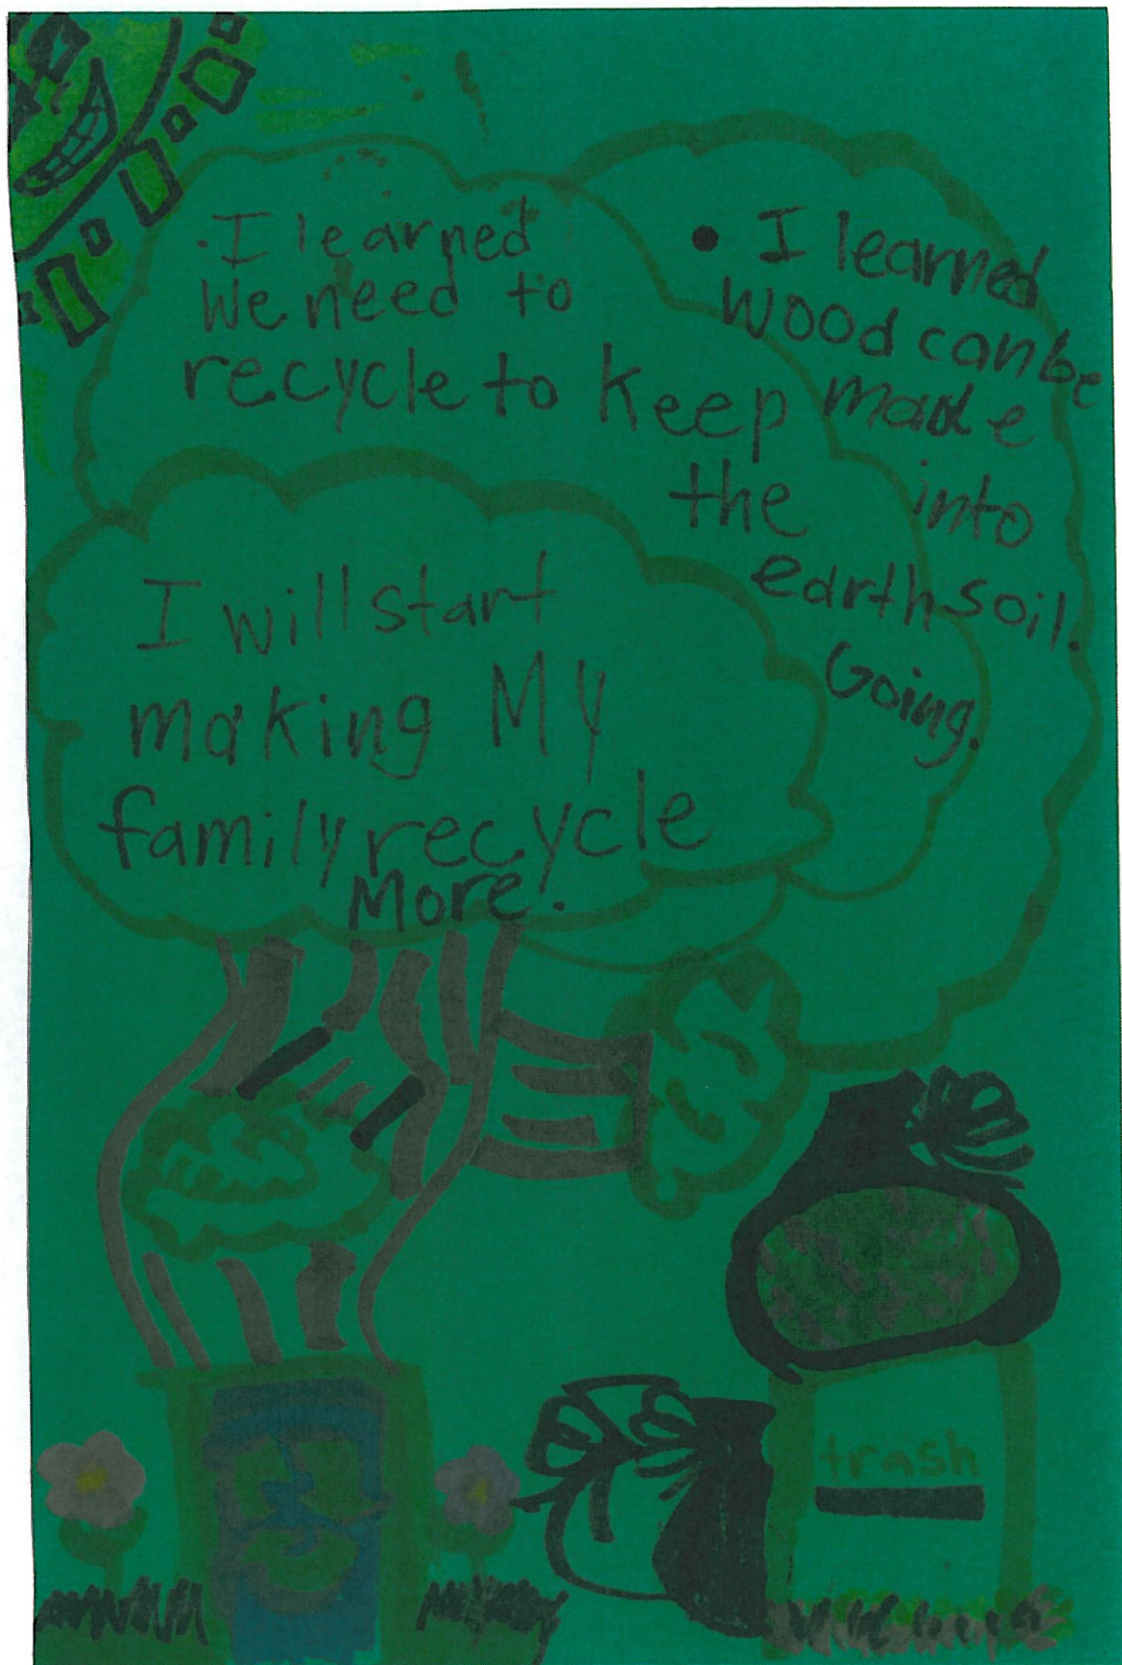

I learned
We need to

recycle to keep made
the into

• I learned
wood can be
earth soil.
Going.

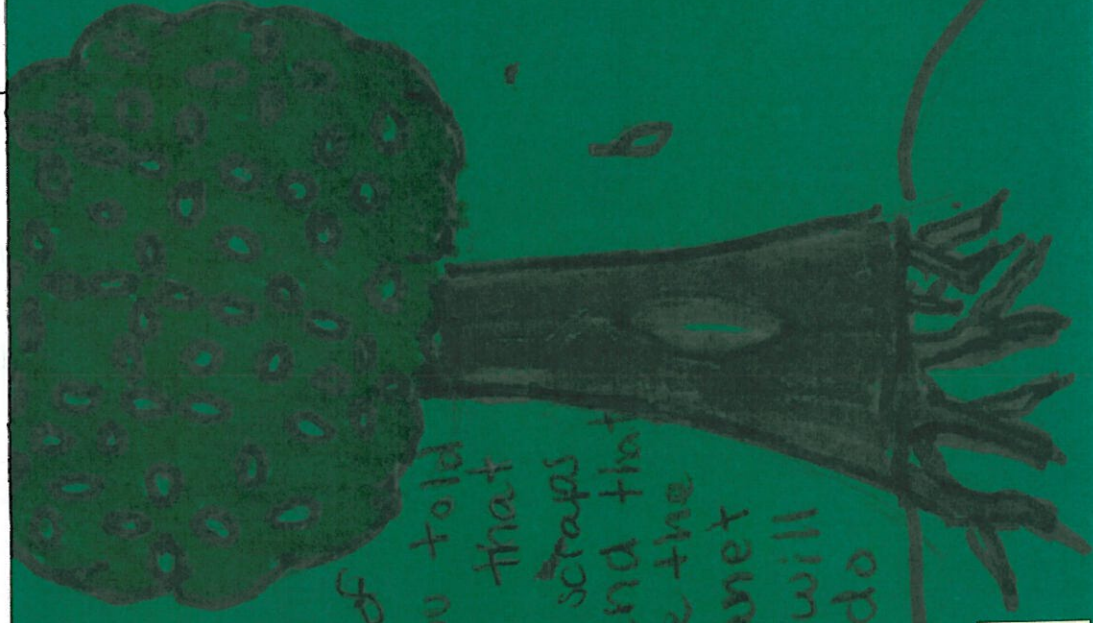

I will start
making My
family recycle
More.

Dear Envirotag,

Thank you for the
thrilling tour you gave
us. I did not know half of
the amazing facts you told
us. With you I learned that
People should collect scraps
and make compost, and that
the more we recycle the
more green our planet
will be. So know I will
collect scraps and do
the 3R!

from

Dear Mrs. Thompson,
Joe, and Mr. Biologist

Thank you for the
Tore I would tell
you some thing that
I heard. California
has the most trash
in the United States.
Recycling is complicated.
Here is one way
to help the environment
Recycle all paper.
Sincerely,

Dear Mrs. Thompson,

Thank you so much for teaching all of us
about our trash. If the Earth had a mouth,
It would thank you. I never knew about
that liner you use, and those sea gulls.
To help the landfill, I will recycle,
reuse, reduce. And I liked the video.
Thanks.

From,

happy Earth,
happy us

Enviro tour,

Thank you so much
for the tour. I learned
so much, like 50,000
plants are planted a
year and 9 billion
dollars we buy on
water bottles.
Well ~~for~~ I heard
so many good ideas
on how I could
help the earth at
my home. One thing
I will do is, to check
if you can recycle
plastics on the bottom.

Thank you for the interesting
field trip, EnviroLour! I learned
that eggs, toilet paper, and
clothes can be composted and
that bottles with a one or
a two can be recycled. From
now on I will get my family
to recycle more even if I have
to dig through the trash.

From,

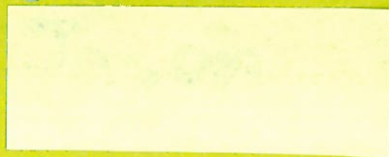

Thank You

Dear Envirotour,

I had a great time during the tour. I couldn't believe that you could make stuff out of tires and that San Diego generates 1.4 tons of trash each year. ~~Starting~~ Starting today I'm going to start recycling cans, bottles, and all the other stuff.

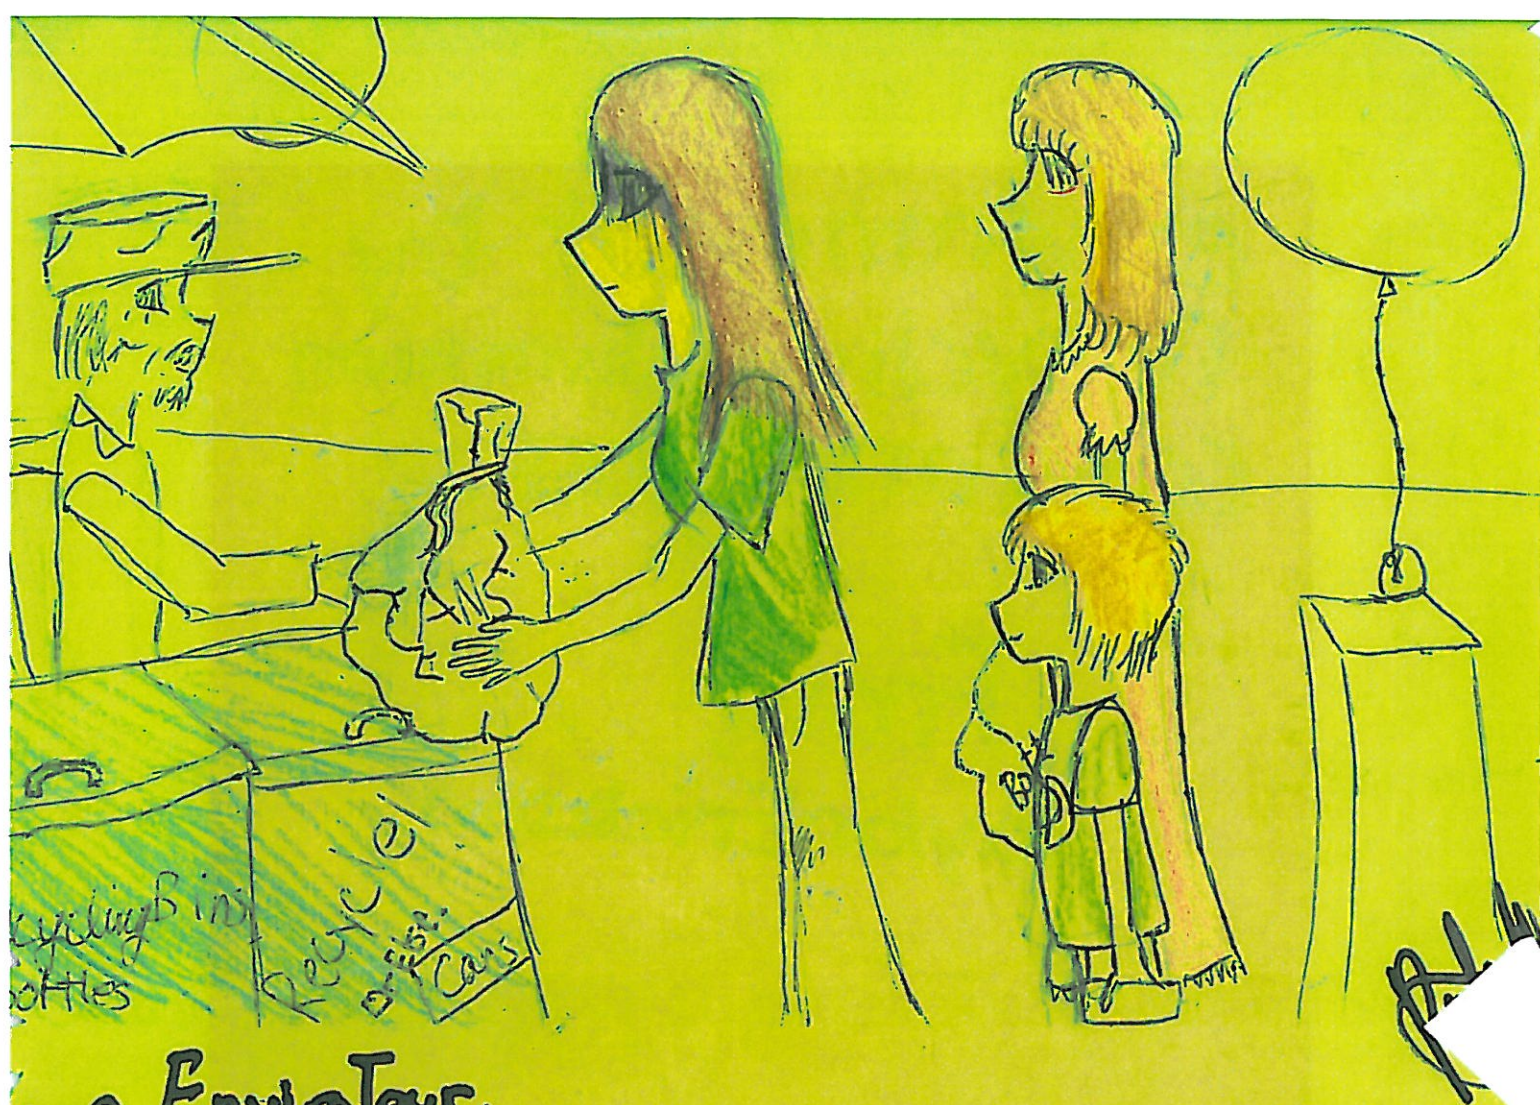

From,

Thanks for the EnviroTour.
It was very fun and
educational. I learned that
by 2012 the "Hole" will
be full. I also learned that
more than 90% of trash can be
recycled. To help the the
environment I will recycle
everything I possibly can.
Thanks again for the tour.

Sincerely,

Dear EnviroTour,

Thank you for showing my class around the landfill. We learned many new things. The City of San Diego generates about 1.4 million tons of trash and waste per year! The California Assembly Bill #939 requires that all cities throughout California reduce their trash amount by 50%! Also if you fail to meet that, you may get fined \$10,000 bucks a day! I also know that I should help save the environment. From now on, I will only use water when I need to. For example, to take quick showers and not leave

environment by
recycling aluminum
cans and glass.

From

Dear Enviro tours,

Thank you for giving us a tour of the landfill. I learned so many things. One of them was you can recycle aluminum cans and glass. Another fact was you can compost apple cores, banana peels, and eggshells. I'll start helping the →
